

## NP 10:45 5% S + 1% Zn

**Jebagro Start is a micro-granular starter fertilizer with nitrogen (N), phosphorus (P), sulphur (S), zinc (Zn)**

- Fertilizer with increased water-soluble phosphorus
- Phosphorus (P) and zinc (Zn) are key factors in the development of roots and the initial growth of young plants
- Contains special supplements
- Granulometry 0.5 to 1.2 mm

**Jebagro Start is supplemented with a special additive and applied in an ultra-localized manner during planting or line sowing. This application has several benefits, including:**

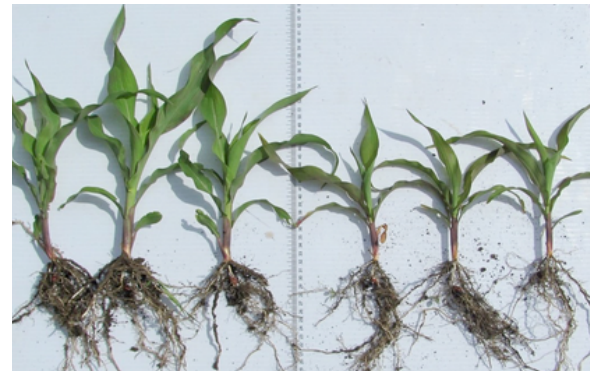

- Improved utilization of phosphorus and other nutrients from both soil and fertilizer
- Development of a deep and branched root system
- Enhanced initial growth and development of young plants
- Formation of more uniform rows
- Increased plant resistance to stressful conditions

Jebagro Start

Control

TOTAL NITROGEN (N)	10%
Ammoniacal nitrogen	10%
PHOSPHORUS PENTOXIDE (P2O5) Soluble in NAC and water	45%
Phosphorus pentoxide (P2O5) Soluble in water	40%
Sulphur (S) soluble in water	5%
Total Zinc (Zn)	1%

Jebagro Start vs. Control

Precise application of Jebagro Start

Conventional fertilizer application

### Application recommendations

### kg/ha

Cereal grains	25 - 45
Corn	25 - 35
Rapeseed	25 - 45
Soya	25 - 30
Sugar beet	30 - 40
Sunflower	25 - 30
Vegetables	30 - 55

Introducing Jebagro Start, a revolutionary fertilizer with a supplement that protects phosphorus from blockage in soil, regardless of the soil's pH level. This innovative formula maximizes nutrient utilization from both the fertilizer and soil during the critical period of intensive growth and development, leading to healthier plants and higher yields. With its unique properties, our product represents a major advance in agricultural fertilizers, providing farmers with an effective tool to optimize crop production and improve their bottom line.
